### **DETAILED ACTION**

**1.0** The application of Vestal et al. for a "MULTITASKING GATEWAY" filed on 12/06/2000 was examined. Claims 1-23 are pending

### **Restriction**

**2.0** Inventions Group 1 and Group 2 are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention Group 1 has separate utility such as performing as combined circuit switching and packet switching. In the instant case, invention Group 2 has separate utility such as performing as having an output queue only. See MPEP § 806.05(d).

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-16 are drawn to Group 1, classified in class 370/352
- II. Claims 17-23 are drawn to Group 2, classified in class 370/417

The grouping are distinct based upon the limitations as follows:

- I. "collected synchronous data and to output asynchronous packetized data" or "to perform tasks on asynchronous packetized data received from the co-processor and output synchronous data" or performing the function of combined circuit switching and packet switching.
- II. "the circuitry configured to perform a plurality of telecommunications functions, the circuitry being configured to access the data queues to store output data from the

Art Unit: 2661

first function in a first queue and to take data to process by a second function from a second data queue” or performing the function having an output queue only

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
